I. Election of Species

1. Claims 1-17 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected vehicle brace for a vehicle, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on September 1, 2006.

- 2. Claim 26 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected loading dock, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on September 1, 2006.
- 3. Applicant's election with traverse of a method of operating a vehicle brace in the reply filed on September 1, 2006 is acknowledged. The traversal is on the ground(s) that the restriction requirement between Inventions I and II was improper.
- 4. This is not found persuasive because Invention I is drawn to a vehicle brace for a vehicle, classified in class 414 subclass 401, whereas Invention II is drawn to a method of operating a vehicle brace, classified in class 414, subclass 809.
- 5. The requirement is still deemed proper and is therefore made FINAL.
- 6. Applicant's election of claims 18-25 in the reply filed on September 1, 2006 is acknowledged.

II. Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Application/Control Number: 10/743,577 Page 3

Art Unit: 3652

1. Claims 18-23, 25 are rejected under 35 U.S.C. 102(b) as being anticipated by HAGEMAN (U.S. Patent No. 4,784,567).

- 1.1. With respect to claim 18, HAGEMAN discloses a method of operating a vehicle brace in response to downward movement of a vehicle's rear edge, where the vehicle brace is attached to a loading dock, the method comprising appreciably slowing the descent of the vehicle's rear edge by having the vehicle brace exert a reactive force upward against the vehicle's rear edge.
- 1.2. With respect to claims 19-25, HAGEMAN discloses the method discussed above, and
 - 1.2(a) With respect to claim 19, further comprising increasing the reactive force in response to increasing the descent or the vehicle's rear edge.
 - 1.2(b) With respect to claim 20, further comprising moving a portion of the vehicle brace horizontally to accommodate horizontal movement of he vehicle's rear edge.
 - 1.2(c) With respect to claim 21, where the step of appreciably swinging the descent of the vehicle's rear edge is carried out by forcing a fluid through a flow restriction.
 - 1.2(d) With respect to claim 22, further comprising sensing when the vehicle is about to be loaded or unloaded.
 - 1.2(e) With respect to claim 23, where the step of appreciably slowing the descent to the vehicle's rear edge is carried out by applying frictional drag.
 - 1.2(f) With respect to claim 25, further comprising raising a vehicle-restraining member 38 to limit horizontal movement of the vehicle.
- 2. Claims 18, 24 are rejected under 35 U.S.C. 103(a) as being unpatentable over HAHN (U.S. Patent No. 6,106,212).
 - 2.1. With respect to claim 18, HAHN discloses a method of operating a vehicle brace in response to downward movement of a vehicle's rear edge, where the vehicle brace is attached to a loading dock, the method comprising appreciably slowing the descent of the

Application/Control Number: 10/743,577

Art Unit: 3652

vehicle's rear edge by having the vehicle brace exert a reactive force upward against the

vehicle's rear edge.

2.2. With respect to claim 24, HAHN teaches a method of operating a vehicle restraint, as

discussed above, where the step of appreciably slowing the descent of the vehicle's rear

edge is accomplished by storing energy in a spring.

III. Conclusion

1. The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

2. Any inquiry concerning this communication or earlier communications from the examiner

should be directed to Gina M. Lupino whose telephone number is (571) 272-6557. The

examiner can normally be reached on 8:30am - 5:00pm EST.

3. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Eileen D. Lillis can be reached on (571) 272-6928. The fax phone number for the

organization where this application or proceeding is assigned is (571) 273-8300.

4. Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published

applications may be obtained from either Private PAIR or Public PAIR. Status information for

unpublished applications is available through Private PAIR only. For more information about

the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to

the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197

(toll-free).
